UNIT PROJECT 1

Video conferencing. Virtual distance learning in the last years became in one of the most important ways to study as a result of the pandemic. Hopefully, the technology has improved and many schools, institutes and universities started to use video conferencing to take classes. Now around the world virtual conference is accepted as a good way to study and there is an increase of the demand of video conferencig in many countries in South America. About it I look for who is allow to take the course and requirements, how much does it cost, and if the student recive a credit for the course. I can find those informations on virtual pages of institutes that take courses of virtual conferencing, for example; Senati, UTP, etc.

Video conference started in 1964 in New York, now it is delivered through online platforms that use internet to communicate people in real-time video and audio. Teacher and students caan use it to take clases, but you should have a computer or another device. It take place where you want, but there are scheduls that you have to choose. About the questions: First; about who is allowed to take the course, I could find that only the people who finished ori s graduated of hisgh school can take it. That is the most important requirement because take that course and finish it is like to have a technical carreer. Second, about its cost I find information that say that its cost was $400 at institutes, but at university its cost is about $600-700. Finally, the student recive a cridt for the course from the institute or university: First they ask you for your personal information, then you have to write about your experience taking the course and finally they post your crdit in their virtual page, also they send it to your email.

Concluding, video conferencing is a good option to study after finish high school because it is cheap and you can live working of it because when you finish to take the course you recive a credit that allow you to work as a technical support of the virtual platform or as a techer, so if you don’t know what to do you can take a course about it. I beleave that the method of learning is changing quickly and major at Video conference could be the clue to work in a near future. We don’t know if in the future will be a pandemic as Covid, but we are sure that virtual learning is a reality and there are a lot of people who want to learn at home, so it is a good option to take a course of video conference.
